On two occasions (page 5405), the authors have misquoted a residue in Rcl1 that was shown to be important for Bms1 interaction. The correct residue is R327, and not R237 as entered in the article. The correct sentences are shown below.

Recent mutational analysis of Rcl1 based on the crystal structure of the yeast Rcl1-Bms1 dimer showed that mutation of **R327**, within the RDK motif, disrupts interaction with Bms1 (10). The Rcl1-Bms1 interaction is required for nuclear import of Rcl1 (34) and, consistent with this, an **R327A** mutation severely impaired the nucleolar localization of yeast Rcl1 (10).
